PROFILE

Results-driven Computer Science graduate with expertise in AI/ML, Cybersecurity, and Secure IoT Architectures. Proficient in developing deep learning models, vulnerability assessment, and risk mitigation strategies. Skilled in Python, SQL, and network security, delivering robust, data-driven solutions that enhance system reliability and compliance.

TECHNICAL SKILLS

Programming: Python, SQL, C, R

Web Technologies: HTML, CSS, JavaScript

Cybersecurity: Penetration Testing, Vulnerability Assessment, Network Security, Kali Linux, Burp Suite

Operating Systems: Windows, Linux (Kali, Ubuntu)

Others: Machine Learning, IOT, Deep learning, AI Technologies

INTERNSHIP EXPERIENCE

Cyber Security Intern — Verzeo

June 2022 – August 2022

Hyderabad, India

Conducted web application penetration testing using Kali Linux and Burp Suite, identifying security vulnerabilities and documenting findings with actionable recommendations for control remediation and risk mitigation.

Software Development Intern — Bluestock Fintech Solutions

January 2025 – March 2025

Hyderabad, India

Supported frontend optimization, database validation, and process documentation while analyzing data trends and collaborating with senior management to ensure audit-ready code and system reliability.

CERTIFICATIONS

- **Coursera:** Certificate Course in Web Page Designing
- **Verzeo:** Cyber Security Intern
- **HackerRank:** Python Basics, Problem Solving (Basic & Intermediate), SQL (Basics, Intermediate & Advanced)
- **Bluestock Fintech:** Software Development Engineer (SDE)

PROJECTS

TIMETABLE GENERATION WEB APPLICATION

2023

Automated class scheduling system using Streamlit and Google OR-Tools with constraint satisfaction for optimal faculty allocation. Features real-time preview, manual adjustments, error detection, and PDF export with support for flexible 6-day schedules.

Tech: Python, Streamlit, OR-Tools, Constraint Programming

SKIN DISEASE DETECTION USING DEEP LEARNING

2024

Built CNN model for skin lesion classification on HAM10000 dataset with data augmentation and hyperparameter tuning, achieving improved accuracy for early disease detection and dermatological diagnosis support.

Tech: Python, TensorFlow, OpenCV, Pandas, NumPy

Pi Shield – Secure IoT Gateway

2025

Developed secure IoT gateway monitoring device traffic and detecting anomalies with automated reporting for network control assessment. Enhanced system reliability and data protection through layered security controls and vulnerability detection mechanisms.

Tech: Raspberry Pi, Python, Linux, Wireshark, Nmap, Flask, Scapy, IPTables

EDUCATION

Undergraduate: Malla Reddy University, B.Tech Computer Science

7.2 CGPA | 2021–2025

Higher Secondary: Sri Nidhi Junior College, MPC

73% | 2019–2021

Secondary: Narayana Co-School

8.8 CGPA | 2019
